Medexa MVP - Project Summary

Generated: June 23, 2026

Scope: Bac

---

1. What Is Medexa?

Real-time therapy session assistant for PT/OT clinicians. It:

* Listens t

Target latency: < 1 second from speech to alert on screen.

---

2. Golden Rules (Never Change)

| Rule

1 | Live detect

---

3. Architecture (4 Layers)

```
Audio -> Speech-to-Text -> TranscriptChunk
    -> Entit
```

---

4. Config Files (Flat Files)

File | Size | Source | Purpose

`activity_syno

Key: Only NCCI needs official CMS import at scale. Synonyms grow iteratively;

Comprehe

Vocabulary lock: activity_synonyms values must match cpt_lookup keys (e.g.

manual_th

5. Verified CPT Map (11 codes)

Activity | CPT | Timed?

therapeutic_e

6. Bugs Fixed

Bug | Issue | Fix

A | 8-min r

7. Prototype ? Backend Mapping

Prototype (Screen 2) | Backend

Live transcript

Modifier 59 alert | `NcciConflictChecker` -> `InsightsPanel.alerts`

Pause / Stop

---

8. Phase Status

Phase | Goal | Status

0-1 | Setup +

AWS account needed? No for local dev. Only for DynamoDB *runtime* and Phase 6 deploy.

---

9. API Endpoints (Implemented)

Method | Endpoint | Purpose

POST | `/sess

---

10. Project Structure (Current)

```
medexa/
```

```
config/
```

```
entity_extractor.py
```

```
bill
```

11. How to Run (No AWS)

```
pip install -e ".[dev]"
```

```
pytest -q
```

Enable DynamoDB later: MEDEXA_USE_DYNAMODB=true + AWS creds + table medexa-sessions.

12. Open Items / Next Steps

1. Run full pytest locally and confirm green.

2. Replace

13. Key Decisions

* **No RAG in live path** - deterministic rules only; RAG for documentation

queries late
